

WESTMINSTER

## Building Division

### Interpretations, Policies & Procedures

Date: July 23, 2018  
Subject: Removal and Reinstallation of Solar PV Panels  
From: Mike Jones, Building Inspection Supervisor

---

When a re-roof building permit is issued for a structure that has an existing photovoltaic solar system, the City of Westminster is allowing solar companies to reinstall the PV solar panels as soon as the roofing work is completed, prior to the City of Westminster building inspectors inspect the re-roof installation. This allowance is being made in order to expedite the customers' utility benefit.

Both a Re-Roof permit and a Remove and Replace Solar permit are required before work commences. The Remove and Replace Solar permit requires a Licensed Electrician or certified Solar Contractor to perform the work.

Interpretation of this policy shall be the authority of the Chief Building Official
